

March 4, 2022

Dr. Federico P. Martin, CEEd, EdD, CESO V
Schools Division Superintendent
SDO Baguio City

Dear Dr. Martin:

Greetings of good health and blessings as we begin 2022 filled with HOPE!

Our team was pleased with the participation of teachers from your division in the online robotics training and competitions that we have initiated. PINOY ROBOT GAMES wishes to forge ahead with significant training for your teachers through this year's **VIRTUAL National Robotics Competition 2022 (NRC2022)**. The event has 2 game categories: Sumobot RC, and Project Ideas Contest.

Sumobot RC serves as a soft introduction to robotics that also evaluates the internet connectivity of the division. The participant controls the SUMO robot (over the internet which we provide) and pushes the opponent's robot out of the Sumo ring. The registered participants will practice for 30 mins. on any of the dates: March 21, 23 or 25. Other practices will be announced to the players. Tentative date for the final event will be one of the days during the last week of May.

Project ideas contest aims to improve the capability of teachers in developing Science investigatory projects at the proposal level. The theme is [Greener Digital Cities](#).

It has 3 stages:

Stage	To be submitted	Submission (tentative)
1st Stage	Project Ideas (SKETCH of the project is required)	April 8, 2022
2nd Stage	Links and Resources	April 29, 2022
3rd Stage	Full project ideas	June 3, 2022

In each stage, the judges will provide feedback in the form of guidance to help the participants improve.

In line with this, we would like to invite two (2) teams from your division (1 team for Sumobot, and 1 team for the Project ideas contest). Each team must consist of two (2) teachers. Top 2 will advance to the National contest.

There will be **NO FEES TO BE COLLECTED**. As a requirement for the registration, please send us the names of the teacher participants, school, contact #, and their email address.

Thank you and stay safe.

With gratitude,

Melvin R. Matulac
